

SHEET BEND—WEAVER'S KNOT

1. Create a loop in the passive yarn (blue).

2. Bring the end of the working yarn (purple) up through the loop.

3. Bring the working end around and **under** both sections of the passive yarn, then up and **over** the passive yarn.

4. Guide the working end through the space created between the short end of the passive yarn and itself.

5. Tighten pulling the end of the working yarn and the working end.

There is more than one way to tie a Weaver's Knot.

The version illustrated on this page is a method to use when there is a relatively small amount of yarn to work with or when the yarn is under some tension.

SHEET BEND—WEAVER'S KNOT

PASSIVE

ACTIVE

1. Take the ends of the two pieces of yarn to be joined. The end on the right is the active yarn, the one on the left the dormant yarn.

This is a method to use when there is more yarn to work with or when there is not as much tension on the yarn.

3. Take the part of the active yarn (purple) that is below the cross, bring it over the thumb and under the left end of itself (purple). Do not let it go under the blue end.

2. Cross the ends and hold the cross between the the thumb and first finger of the right hand.

5. Tighten by holding the bent thread (blue) with the left hand and pull on the purple ends with the right hand.

4. Drop the active yarn and take the end of the dormant yarn (blue). Bend it and insert it in the circle formed in 3.
