

## 10. WEAVE!

### TIPS

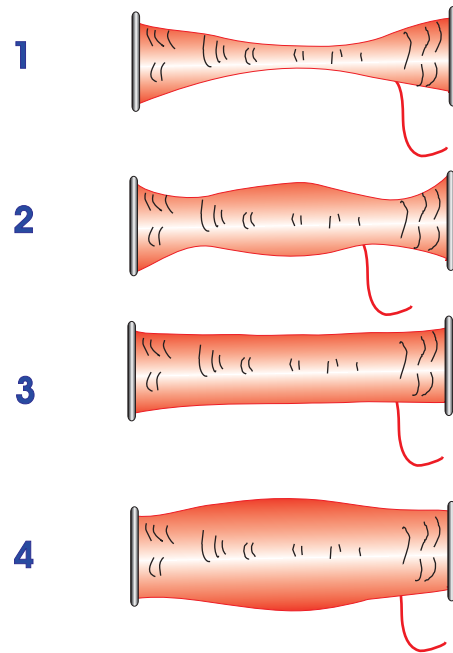

- ▶ At the start, wind a few bobbins so that you can weave uninterrupted.
- ▶ Leave the selvages alone!

### WINDING BOBBINS

Place the bobbin on the winder and turn it a few times using your fingers. (Be sure to go in the direction you will be winding.)

1. While winding lead the yarn back and forth building up the weft at each end of the bobbin. Try to keep an **EVEN** tension on the yarn.
2. Continue carrying the yarn back and forth across the center and up the ends already filled.
3. Fill in the center of the bobbin until the yarn lies in a straight line from end to end
4. Continue winding until the bobbin is filled (slightly convex).

When full remove the bobbin from the winder and slip it onto the bar of the shuttle. Bringing the yarn from underneath the bobbin, pass the end through the hole in the side of the shuttle.
